

IN THE SPECIFICATION

Submitted herewith is a substitute Table 2 for entry into the application. This Table is being submitted in response to the Examiner's notation that Comparative Steel 31 does not show a boron content that is outside the claimed range of 0.0005 to 0.02% B. The value of B shown in Table 2 was a typographical error and it should not read 0.0152%. Clearly, the B content in Comparative Steel 31 is identified as being outside the range of the invention and therefore, the value of 0.0152% is an obvious mistake. The correct value is 0.0252% and entry of the corrected Table 2 is respectfully requested.
